Free Lawn Care Spreadsheet: how to use it

Start here:

Yellow cells are yours to fill in. Green-grey cells hold formulas: leave them alone and they fill themselves.

The example file is filled with fictional data so you can see every number working. The blank file is the same workbook, empty: use that one.

Google Sheets: File > Import > Upload the .xlsx (or open it from Google Drive), then File > Save as Google Sheets. Excel: just open it (Excel 2010 or newer). Numbers on Mac also opens it.

Set up (5 minutes):

1. Settings: your mowing price by lot size (column A is where each size band starts, in square feet), your add-on services and prices, and the year (G2).

2. Customers: name, address and lot size. The mow price comes from your lot-size table.

3. Visits: one row per service: date, customer, service (Mow or an add-on). The price fills in; type a different one only if you charged something else. Mark Paid Yes or No.

What you get:

Dashboard: visits and revenue by month and for the year, and the money customers still owe you. Customers: billed so far and what each one owes.

Limits: 100 customers and 400 visits. Need equipment and fuel costs, profit, a season value for each lawn and visits per season by frequency? See the paid Lawn Care Business Tracker at tuper.app/templates. This is a record-keeping tool, not tax advice.
