Free Reseller Inventory Spreadsheet: how to use it

Start here:

Yellow cells are yours to fill in. Green-grey cells hold formulas: leave them alone and they fill themselves.

The example file is filled with fictional data so you can see every number working. The blank file is the same workbook, empty: use that one.

Google Sheets: File > Import > Upload the .xlsx (or open it from Google Drive), then File > Save as Google Sheets. Excel: just open it (Excel 2010 or newer). Numbers on Mac also opens it.

Set up (3 minutes):

1. Settings: your selling platforms with the fee % each one takes (typed in, not read from the site: check each platform's current fees and edit them), your sourcing places and the year (E2).

2. Inventory: one row per item the day you buy it: name, where you bought it, date and cost. When you list it, add the platform and list price. When it sells, type the sold date, the sale price and the shipping you paid.

The platform fee, profit, margin, days to sell and the IN STOCK / SOLD status fill in. Profit = sale price minus what you paid, the platform fee and your shipping cost. Unsold items show yellow.

What you get:

Dashboard: items sold, revenue, fees, cost of goods, shipping and profit by month; each platform with sales, revenue and profit; items in stock, cash tied up in stock and the listed value of stock.

Limits: 500 items, 5 platforms, 10 sourcing places. Need an Expenses tab (supplies, subscriptions, travel), a tax set-aside, stale-stock alerts and average days to sell per platform? See the paid Reseller Inventory and Profit Tracker at tuper.app/templates. This is a record-keeping tool, not tax advice.
