Free Wedding Budget Spreadsheet: how to use it

Start here:

Yellow cells are yours to fill in. Green-grey cells hold formulas: leave them alone and they fill themselves.

The example file is filled with fictional data so you can see every number working. The blank file is the same workbook, empty: use that one.

Google Sheets: File > Import > Upload the .xlsx (or open it from Google Drive), then File > Save as Google Sheets. Excel: just open it (Excel 2010 or newer). Numbers on Mac also opens it.

Set up (5 minutes):

1. Settings: your total budget (B1) and guest count (B2).

2. Budget: one row per category (venue, catering, photographer...) with what you plan to spend. Contracted, paid, left to pay and an OVER BUDGET flag fill in.

3. Vendors: one row per vendor: name, category and the contract total. Paid and balance owed fill in from Payments.

4. Payments: one row per deposit or instalment, with the date, the vendor and the amount.

What you get:

Dashboard: budget, planned, contracted, paid, still to pay, what is left in the budget, cost per guest and every category against its plan.

Limits: 15 categories, 40 vendors, 150 payments. Need a final payment date for each vendor? See the paid Wedding Budget & Vendor Payment Tracker at tuper.app/templates. This is a planning tool, not financial advice.
